Product Overview

Introducing the New Slegers range of high quality, Cobra Snake Fibreglass Duct Rods. Our rods are made from high quality fibreglass strands, coated with a tough yellow Polypropylene (PP) to give a unique combination of strength and durability, of which allows for greater wear resistance. The fibreglass core gives power & pushing stability whereas the PP coating reduces friction to a minimum. As an added feature, all diameters have a central copper trace wire, making it ideal for all locating type applications, and can also be used as part of a CCTV pipe/conduit or cleaning system.
